Mountain formation Wikipedia

January 9th, 2019 - Mountain formation refers to the geological processes that underlie the formation of mountains These processes are associated with large scale movements of the Earth s crust tectonic plates Folding faulting volcanic activity igneous intrusion and metamorphism can all be parts of the orogenic process of mountain building The formation of mountains is not necessarily related to the

Mountain Wikipedia

January 11th, 2019 - A mountain is a large landform that rises above the surrounding land in a limited area usually in the form of a peak A mountain is generally steeper than a hill Mountains are formed through tectonic forces or volcanism These forces can locally raise the surface of the earth Mountains erode slowly through the action of rivers weather conditions and glaciers
